

DECREASING CONTAINER DOWNTIME DURING MIGRATION

Adrian Reber <areber@redhat.com>

DevConf.cz 2017

CONTAINER MIGRATION

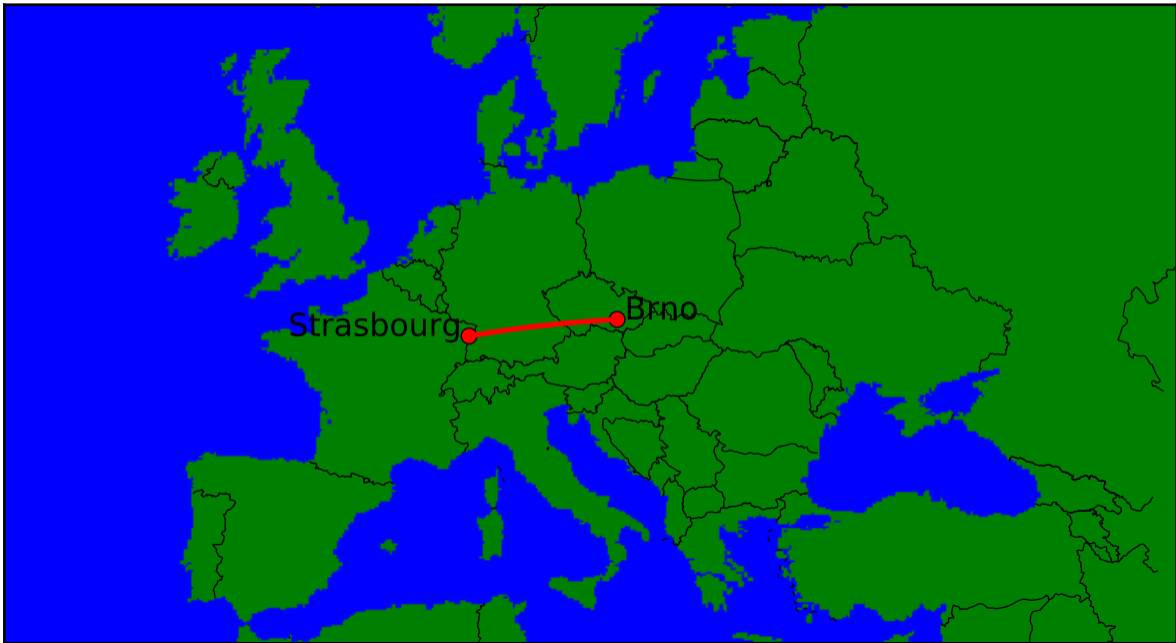

- runC (<https://runc.io/>) based containers
- criu (<https://criu.org/>) based migration
- Xonotic (<http://xonotic.org/>) in the container

LOCAL MIGRATION DEMO

Local Migration Demo

LOCAL MIGRATION SETUP

- `yum install --releasever 7.3 --installroot /runc/containers/xonotic/rootfs bash coreutils procps-ng iptools xonotic-server`
- `oci-runtime-tool generate --args "/usr/bin/darkplaces-dedicated" --args "-userdir" --args "/tmp" --network host --tmpfs /tmp --tmpfs /run --rootfs-readonly | jq 'del(.linux.seccomp)' > config.json`
- `runc run xonotic -d -b /runc/containers/xonotic/ &> /dev/null < /dev/null`
- RHEL 7.3
 - `runc-0.1.1-5.el7.x86_64`
 - `criu-2.3-2.el7.x86_64`

REMOTE MIGRATION SETUP

- Layer 2 OpenVPN Tunnel
- Floating IP address using `keepalived`
- Pre-Copy Migration
- Still RHEL 7.3 kernel and `criu`
- Using `runC` PR #1001 (<https://github.com/opencontainers/runc/pull/1001>)

OPTIMIZATIONS - PRE-COPY

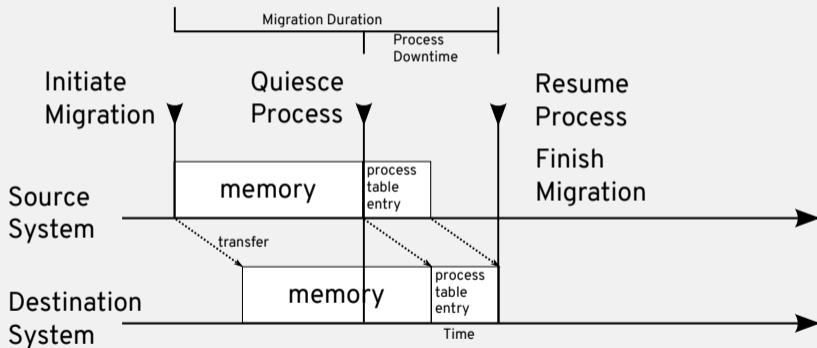

Figure: Pre-Copy Migration

Montreal

Strasbourg

Montreal

Brno

FURTHER OPTIMIZATION

- Lazy Migration
 - Based on userfaultfd
 - Requires CRIU from `criu-dev` branch
 - Requires CRIU patches (some already posted)
 - Requires runC patches (only on my system)
 - Limited to processes which are not forking (on RHEL7.3)
 - Kernel patches to support forking processes are in linux-next tree

THANK YOU
